Introduction to Networking

CAN201 – Lecture 1

Module Leader: Dr. Wenjun Fan

Co-teacher: Dr. Fei Cheng

Flexcil - The Smart Study Toolkit & PDF, Annotate, Note

This Document has been modified with Flexcil app (Android) https://www.fexcil.com

Basic Information

- **Teachers:**
  - Dr. Wenjun Fan (Module Leader), Wenjun.fan@xjtlu.edu.cn
  - Dr. Fei Cheng, fei.cheng@xjtlu.edu.cn

- **TAs:**

- **Textbook:**
  - **Computer Networking: A TOP-DOWN APPROACH**
    - Seventh Edition
    - Author: Jim Kurose, Keith Ross

Assessments

- In class test: 15% (Across the Labs)
- Project: 40% (Two Parts/Group work)
- Final Exam: 45%

Flexcil - The Smart Study Toolkit & PDF, Annotate, Note

This Document has been modified with Flexcil app (Android) https://www.fexcil.com

In Class Test

Assessment Task	Learning Outcomes	Weighting	Release Date	Due Date	Need Submission?
Socket Programming	AB	5%	14/Oct/2024	18/Oct/2024	YES
Generative AI Permissions		No			
Requirement and Guideline of the Assessment Task					
The students are required to develop a socket client and a socket server. These will be tested by running them on two separate virtual machines (VMs) to verify that they can communicate effectively.					
Assessment Task	**Learning Outcomes**	**Weighting**	**Release Date**	**Due Date**	**Need Submission?**
Network Description	AB	5%	04/Nov/2024	08/Nov/2024	YES
Generative AI Permissions		No			
Requirement and Guideline of the Assessment Task					
The students are required to use Mininet to describe and create a network topology according to the network diagram given by the test.					
Assessment Task	**Learning Outcomes**	**Weighting**	**Release Date**	**Due Date**	**Need Submission?**
Solution to DoS Attack	AB	5%	18/Nov/2024	22/Nov/2024	YES
Generative AI Permissions		No			
Requirement and Guideline of the Assessment Task					
The students are required to provide a solution to a security problem given by the test, and also explain the solution.					

Flexcil - The Smart Study Toolkit & PDF, Annotate, Note

This Document has been modified with Flexcil app (Android) https://www.fexcil.com

Project

Assessment Task	Learning Outcomes	Weighting	Release Date	Due Date	Need Submission?
CW Part 1	ALL	20%	07/Oct/2024	15/Nov/2024	YES
Generative AI Permissions		No			
Requirement and Guideline of the Assessment Task					
File uploading and downloading should be one of the most important network-based applications in our daily life. This part of the networking project aims to use Python Socket programming to implement a client-side application for file uploading and downloading based on a given protocol. The examiner will define and release the protocol description and the server-side application on Learning mall. However, the released server-side code might have some syntax bugs. The student should firstly fix all the bugs and run the server-side code. Then, you should implement the client-side application using Python and test your code using the server-side application.					

Assessment Task	Learning Outcomes	Weighting	Release Date	Due Date	Need Submission?
CW Part 2	ALL	20%	04/Nov/2024	13/Dec/2024	YES
Generative AI Permissions		No			
Requirement and Guideline of the Assessment Task					
This part of the networking project aims to use Mininet to create a simple SDN network topology and emulate a traffic control function through using the SDN flow entry. Assuming that the client side only knows the service running on server 1 and communicates with server 1 (without knowing the existence of the service on server 2). However, the SDN controller can manipulate (forward/redirect) the traffic without the awareness of the client. The student needs to develop the SDN controller application to create effective flow entry to make the incoming network traffic forward or redirected.

This Document has been modified with Flexcil app (Android) https://www.fexcil.com

Assignment Policies

Programming projects are ~ 25% of your grade

- 4 – 5 weeks for each
- Manage your time

Assignments will be done in Python 3 and other plugins/modules.

Late submission will follow the university late submission policy [1].

Academic dishonesty will not be tolerated.

[1] Item 42-43, Part F, Code of Practice on Assessment of XJTLU.

Flexcil - The Smart Study Toolkit & PDF, Annotate, Note

This Document has been modified with Flexcil app (Android) https://www.fexcil.com

Academic Dishonesty Policy

- **Academic dishonesty is anything that involves you not doing the assignment yourself, including:**
  - Copying from your “friend”
  - Copying from an internet or other source
  - Paying someone to complete the assignment
- **Submitting a course assignment that is not your work falls under the University major plagiarism or collusion policy. The penalties for this are:**
  - Automatic failure of the course, with NO RESIT
  - A permanent mark on your transcript
  - A letter to your parents notifying them of your actions
- **The use of Generative AI for content generation is not permitted on all assessed coursework in this module.**

Lecture Syllabus

Week 1

Lecture 1 - the theoretical basis for networking: protocol, layer and model···

Week 2

Lecture 2 - the application layer: principles, web and HTTP···

Week 2

Lecture 3 - the application layer: Email, DNS, P2P, multimedia protocols···

Week 4

Lecture 4 - the transport layer: multiplexing, UDP and reliable data transfer···

Week 5

Lecture 5 - the transport layer: TCP and congestion control···

Flexcil - The Smart Study Toolkit & PDF, Annotate, Note

This Document has been modified with Flexcil app (Android) https://www.fexcil.com

Lecture Syllabus

Week 6
Lecture 6 - the network layer:
router, internet, IPv4 and IPv6 ···

Week 7:
no class···

Week 8
Lecture 7 - the network layer:
routing algorithm···

Week 9
Lecture 8 - the network layer:
control plane ···

Week 10
Lecture 9 - The link layer 1

Lab Sessions

Lab time
SC464

Thu. or Fri.

Labs will be split between **Python** and **networking** experiments

Attendance to labs is required

Flexcil - The Smart Study Toolkit & PDF, Annotate, Note

This Document has been modified with Flexcil app (Android) https://www.fexcil.com

Labs & Projects Plan

Week Number and/or Date	Lab	Topic/Theme/Title	Lecturer
Week 1	Lab 1	Linux OS, Virtual Machine and Mininet	Wenjun Fan
Week 2	Lab 2	Wireshark and Tcpdump	Wenjun Fan
Week 3	Lab 3	Python1: IDE and Interpreter	Fei Cheng
Week 4	Lab 4	Python2: Basic syntax & Data structure	Fei Cheng
Week 5	Lab 5	Python3: Network programming (Socket)	Fei Cheng
Week 6	Lab 6	Python4: Modules,Pypi,OOP,Parallel Computing	Fei Cheng
Week 8	Lab 7	Building network topology using Mininet	Wenjun Fan
Week 9	Lab 8	SDN controller application with Mininet	Wenjun Fan
Week 10	Lab 9	DoS attack on SDN	Wenjun Fan
Week 11	Lab 10	TCP connection analysis	Wenjun Fan
Week 12	Lab 11	Scanner and Firewall	Wenjun Fan
Week 13	Lab 12	Intrusion Detection System	Wenjun Fan

Computer Lab Disclaimer
计算机实验室免责声明

Welcome to the SC464 Computer Lab. To ensure a productive and secure environment for all users, please be aware of the following guidelines:

欢迎来到 SC464 计算机实验室。为了确保所有用户有一个高效和安全的环境，请注意以下指南：

1. **Backup Your Work**: Please save and backup your homework or task files on your own device before you shut down or leave the computer. All files stored on these computers will be **permanently removed** upon reboot.

   备份您的工作：在关闭或离开计算机之前，请将您的作业或任务文件保存在您自己的设备上并备份。这些计算机上的所有文件将在重启后被永久删除。

2. **Security and Conduct**: Do not engage in any malicious activities or violate the security policies while using these computers. Any individual found responsible for such actions will be held accountable for their behaviour and subject to disciplinary actions.

   安全和行为：在使用这些计算机时，不要从事任何恶意活动或违反安全政策。任何被发现负责此类行为的个人将对其行为负责，并将面临纪律处分。

3. **Respect Shared Resources**: Please be considerate of other users. Do not install unauthorized software, alter system settings, or use excessive bandwidth.

   尊重共享资源：请考虑其他用户的需求。不要安装未经授权的软件，修改系统设置或使用过多的带宽。

4. **Privacy Notice**: Be aware that this is a shared environment. Avoid storing sensitive personal information on these computers as it may not be secure.

   隐私注意：请注意，这是一个共享环境。出于安全考量，避免在这些计算机上存储敏感的个人信息。

5. **Report Issues**: If you encounter any technical problems or notice any suspicious activity, please report it to the lab administrator immediately.

   报告问题：如果您遇到任何技术问题或注意到任何可疑活动，请立即向实验室管理员报告。

Physical media 物理介质

- **Guided media:**
  - signals propagate in solid media: copper, fiber, coaxial cable, glass

- **Unguided media:**
  - signals propagate freely, e.g., radio

Flexcil - The Smart Study Toolkit & PDF, Annotate, Note

This Document has been modified with Flexcil app (Android) https://www.fexcil.com

Physical media: twisted pair, coax, fiber

Twisted pair (TP) 双绞线

- two insulated copper wires
  - Category 5: 100 Mbps, 1 Gbps Ethernet
  - Category 6: 10Gbps

RJ-45
Web socket

Coaxial cable: 同轴电缆

- two concentric copper conductors
- bidirectional
- broadband:
  - multiple channels on cable

Fiber optic cable:

- glass fiber carrying light pulses, one pulse = a bit
- high-speed operation:
  - high-speed point-to-point transmission (e.g., 10-100 Gbps transmission rate)
- low error rate:
  - repeaters spaced far apart
  - immune to electromagnetic noise

Flexcil - The Smart Study Toolkit & PDF, Annotate, Note

This Document has been modified with Flexcil app (Android) https://www.fexcil.com

Physical media: radio

- Signal carried in electromagnetic spectrum
- No physical "wire"
- Bidirectional
- Propagation environment effects:
  - Reflection
  - Obstruction by objects
  - Interference!

Radio link types:

- Wireless LAN (e.g., WiFi)
  - 54 Mbps – 9.6Gbps
- Wide-area (e.g., cellular)
  - 4G cellular: ~ 100 Mbps
  - 5G cellular: ~ 1Gbps
- Satellite
  - Kbps to 45Mbps channel (or multiple smaller channels)
  - Starlink ~ 1440Mbps
  - 270 msec end-end delay

Flexcil - The Smart Study Toolkit & PDF, Annotate, Note

This Document has been modified with Flexcil app (Android) https://www.fexcil.com

Different methods to access the internet

Early methods:

PSTN
DSL
TV Net

Modern methods:

FTTH
Wireless

1979

Dial-up Internet access (PSTN)

Dial-up Internet access is a form of Internet access that uses the facilities of the public switched telephone network (PSTN) to establish a connection to an Internet service provider (ISP) by dialing a telephone number on a conventional telephone line. Dial-up connections use modems to decode audio signals into data to send to a router or computer, and to encode signals from the latter two devices to send to another modem.

Modulator and demodulator

Bandwidth: 56 Kbps ~ 10 min for a mp3 music

https://en.wikipedia.org/wiki/Dial-up_Internet_access

Flexcil - The Smart Study Toolkit & PDF, Annotate, Note

```

(repeated 6 times)

"Modulation modes available:
-PCM V.90/V.92 analogue
-V.34 duplex
-V.32/V.32 bis
-V.23 duplex
-V.22/V.22 bis
-V.21

V.42 LAPM is available.

PSTN connection is over a
regular landline (not cellular).
My network is analogue."

FSK data @ 300 bps:

```
1111111111 0000001111 0100000111
0101001101 0110010001 0001010011
0011000101 0101100001 0010101001
```

(repeated 3 times)

"Oh, I can do any of those
modes as well. Except my
V.90/V.92 is digital.

V.42 LAPM is available.

PSTN connection is over a
regular landline (not cellular).
My network is digital."

DPSK data @ 600 bps:

```
1111011100101111111111000
0100010001111110110011111
```

"I can transmit at either carrier
frequency at whichever standard
symbol rate except 3429. Tx and
Rx symbol rates must be equal.

I can reduce power if needed.
I can support up to 1664-point
signal constellations.
My clock source is internal."

DPSK data @ 600 bps:

```
1111011100101111111111000
1010001011110110011111011
```

"I can transmit at either carrier
frequency at whichever standard
symbol rate except 3429. Tx and
Rx symbol rates must be equal.

I can reduce power if needed.
I can support up to 1664-point
signal constellations.
My clock source is external."

modems send a wide-spectrum probing signal in both directions to do measurements of the telephone line

DPSK data @ 600 bps:

```
0111101110010000100000000011001
1000010111100010111000010111100001
0000101010110010000000110010101010
0010000111
```

"Please don't reduce your
power by more than 6 dB.

I'm not equipped to accurately
measure the frequency offset
of the tones you sent.

Using different symbol rates,
we could achieve the following:

symrate	ur pre-emph α	bps
2400	6 dB	14400
2743	8 dB	16800
2800	8 dB	16800
3000	8 dB	16800
3200	8 dB	19200
3429	10 dB	21600

I can use the higher frequency
carrier at any symbol rate."

DPSK data @ 600 bps:

```
1111011100100000000000000011110010000
0101100000000000010010110001011011111
```

"Please don't reduce power
any further.

Your tones were offset by 0 Hz.

Let's use a symbol rate of 3200.
We can achieve a maximum of
4800 bps. For your pre-emphasis
filter, select the parameters
β = 1.0 dB and γ = 2.0 dB.

Please use carrier at 1920 Hz
for transmission, I'll use 1829."

Modems go to scrambled data and learn how the other modem sounds over the channel. The final bitrate and signal constellation are also decided on.

A final training phase called Phase 4 will follow, after which the modem speaker goes mute and data can be put through the connection.

1988

Digital subscriber line (DSL)

- **Telephone line based:**
  - To central office DSL Access Multiplexer (DSLAM)
  - Data over DSL phone line goes to Internet
  - Voice over DSL phone line goes to telephone net

- **Bandwidth**
  - Upstream transmission rate < 2.5 Mbps (typically < 1Mbps)
  - Downstream transmission rate < 24 Mbps (typically < 10Mbps)
  - ADSL = Asymmetric Digital Subscriber Line

Flexcil - The Smart Study Toolkit & PDF, Annotate, Note

This Document has been modified with Flexcil app (Android) https://www.fexcil.com

TV net

- **Key technology: Frequency division multiplexing (FDM)**
  - Different channels transmitted in different frequency bands

Flexcil - The Smart Study Toolkit & PDF, Annotate, Note

This Document has been modified with Flexcil app (Android) https://www.fexcil.com

TV net

- **HFC: hybrid fiber coax**
  - Asymmetric: 30Mbps downstream transmission rate, 2 Mbps upstream transmission rate

Flexcil - The Smart Study Toolkit & PDF, Annotate, Note

This Document has been modified with Flexcil app (Android) https://www.fexcil.com

FTTH: fiber to the home

FTTH using the passive optical networks (PONs) distribution architecture

Flexcil - The Smart Study Toolkit & PDF, Annotate, Note

This Document has been modified with Flexcil app (Android) https://www.fexcil.com

Wireless access networks

- **Base Stations should be used to provide the signal!**

Wireless LANs:

- within building (30 m)
- 802.11b/g/n (WiFi): 11, 54, 450 Mbps transmission rate
- 802.11ax : 9.6 Gbps (MIMO)

Li-Fi（in the future）

- up to 10Gbps
- over the visible light, ultraviolet, and infrared spectrums

Wide-area wireless access

- provided by ISP
- Up to 1Gbps or More
- 3G, 4G-LTE, 5G, Starlink

Flexcil - The Smart Study Toolkit & PDF, Annotate, Note

How to deliver the data via the Internet?

Who “carries” a message?
How to pass a message?
The basic idea of the internet.

Flexcil - The Smart Study Toolkit & PDF, Annotate, Note

This Document has been modified with Flexcil app (Android) https://www.fexcil.com

A closer look at network structure

- **Network edge = Host:**
  - Clients: PCs, Mobile phones, Smart Devices
  - Servers: normally hosted in data centers
- **Physical media to access networks:**
  - Wired or wireless communication links

Flexcil - The Smart Study Toolkit & PDF, Annotate, Note

This Document has been modified with Flexcil app (Android) https://www.fexcil.com

Network Core

- **Mesh of interconnected routers**
- **Packet-switching:** 分组交换
  - Hosts break application-layer messages into small packets
  - Packages are forwarded from one router to the next, across links on path from source to destination

Flexcil - The Smart Study Toolkit & PDF, Annotate, Note

This Document has been modified with Flexcil app (Android) https://www.fexcil.com

Two key network-core functions

路由 *Routing:* determines source-destination route taken by packets

- *routing algorithms*

转发 *Forwarding:* move packets from router's input to appropriate router output

*IP address is used

Network Layer

Flexcil - The Smart Study Toolkit & PDF, Annotate, Note

This Document has been modified with Flexcil app (Android) https://www.fexcil.com

Packet Switching: store-and-forward

- Takes *L*/*R* seconds to transmit (push out) *L*-bit packet into link at *R* bps
- *Store and forward:* entire packet must arrive at router before it can be transmitted on next link
- End-end delay = 2*L*/*R* (assuming zero propagation delay)

One-hop example:

- *L* = 7.5 Mbits
- *R* = 1.5 Mbps
- one-hop transmission delay = 5 sec

Flexcil - The Smart Study Toolkit & PDF, Annotate, Note

This Document has been modified with Flexcil app (Android) https://www.fexcil.com

Packet Switching: queueing delay, loss

排队延迟，丢失

Queuing and loss:

超过

- If arrival rate (in bits) to link exceeds transmission rate of link for a period of time:
  - packets will queue, wait to be transmitted on link
  - packets can be dropped (lost) if memory (buffer) fills up

Flexcil - The Smart Study Toolkit & PDF, Annotate, Note

This Document has been modified with Flexcil app (Android) https://www.fexcil.com

电路切换

Circuit switching

专用资源

- Dedicated resources: no sharing
  - circuit-like (guaranteed) performance
- Circuit segment is idle if not used by call *(no sharing)* 空闲的
- Commonly used in traditional telephone networks

Operator
接线员

manually circuit switching

Flexcil - The Smart Study Toolkit & PDF, Annotate, Note

This Document has been modified with Flexcil app (Android) https://www.fexcil.com

Circuit switching: FDM versus TDM

Example:

4 users

FDM: Frequency Division Multiplexing

将总带宽划分多个频段，每个频段独立传输一个信号

TDM: Time Division Multiplexing

每个时隙传输一个信号.

Flexcil - The Smart Study Toolkit & PDF, Annotate, Note

This Document has been modified with Flexcil app (Android) https://www.fexcil.com

Packet switching VS circuit switching

Packet switching allows more users to use network!

Example:

- 1 Mb/s link
- each user:
  - 100 kb/s 估算速率
  - aka, active 10% of time (用户只有10%时间活跃)

用 *Circuit-switching:*

- 10 users

用 *Packet switching:*

- with 35 users, probability > 10 active at same time is less than 0.0004

$$\sum_{i=11}^{35} C_{35}^{i} p^{i} (1-p)^{35-i}$$

Q: how did we get value 0.0004? =项分布得到

Q: what happens if > 35 users ?

同时超过10人 prob↑

Flexcil - The Smart Study Toolkit & PDF, Annotate, Note

This Document has been modified with Flexcil app (Android) https://www.fexcil.com

Packet switching VS circuit switching

Packet switchi … **rk!**

prob

100人用有0.4概率
同时有10人在线

Example:

- 1 Mb/s link
- each user:
  - 100 kb/s
  - aka, active 10% o…

1 Mbps link

- *Circuit-switching* …
  - 10 users
- *Packet switching* …
  - with 35 users, pr…
    at same time is less than 0.0004

$$\sum_{i=11}^{35} C_{35}^{i} p^{i}(1-p)^{35-i}$$

…alue 0.0004?

Q: what happens if > 35 users ?

Flexcil - The Smart Study Toolkit & PDF, Annotate, Note

This Document has been modified with Flexcil app (Android) https://www.fexcil.com

Packet switching VS circuit switching

- **Is packet switching (PS) a "winner?"**
  - PS advantages:
    - resource sharing
    - simpler, no call setup
  - PS drawbacks:
    - excessive congestion possible: delay and loss
      - protocols needed for reliable data transfer, congestion control
  - How to provide circuit-like behavior PS?
    - Bandwidth guarantees
    - New methods should be developed

Flexcil - The Smart Study Toolkit & PDF, Annotate, Note

This Document has been modified with Flexcil app (Android) https://www.fexcil.com

Protocols (协议)

Human protocols:

- "what's the time?"
- "I have a question"

… specific messages sent

… specific actions taken when messages received, or other events

Network protocols:

- Machines rather than humans
- All communication activity in Internet governed by protocols

A set of rules for how data is transmitted across the network

Protocols define format, order of messages sent and received among network entities; and actions taken on message transmission, receipt 收讫

Internet: Network of networks

- **End systems connect to Internet via access ISPs (Internet Service Providers)**
  - residential, company and university ISPs
- **Access ISPs in turn must be interconnected.**
  - so that any two hosts can send packets to each other
- **Resulting network of networks is very complex**
  - 发展 evolution was driven by economics and national policies
- **Let's take a stepwise approach to describe current Internet structure:**

Flexcil - The Smart Study Toolkit & PDF, Annotate, Note

This Document has been modified with Flexcil app (Android) https://www.fexcil.com

Network of networks

Question: given *millions* of access ISPs, how to connect them together?

Flexcil - The Smart Study Toolkit & PDF, Annotate, Note

This Document has been modified with Flexcil app (Android) https://www.fexcil.com

Network of networks

Option: connect each access ISP to every other access ISP?

Flexcil - The Smart Study Toolkit & PDF, Annotate, Note

This Document has been modified with Flexcil app (Android) https://www.fexcil.com

Network of networks

Option: connect each access ISP to one global transit ISP?

Customer and provider ISPs have economic agreement.

Service models

IP stack

ISO/OSI reference model

Flexcil - The Smart Study Toolkit & PDF, Annotate, Note

This Document has been modified with Flexcil app (Android) https://www.fexcil.com

Internet protocol stack → 5层

- ***application:*** **supporting network applications** 直接和用户提供服务
  - FTP, SMTP, HTTP 文件传输，电子邮件，网页浏览
- ***transport:*** **process-process data transfer**
  - TCP, UDP 使用端口号区分应用程序
- ***network:*** **routing of datagrams from source to destination** 将上层数据段 ⇒ 数据报，从源IP地址 → 目标IP地址
  - IP, routing protocols
- ***link:*** **data transfer between neighboring network elements** Mac地址，交换机
  - Ethernet, 802.11 (WiFi), PPP

局域网内传输

physical: **bits "on the wire"**

Flexcil - The Smart Study Toolkit & PDF, Annotate, Note

This Document has been modified with Flexcil app (Android) https://www.fexcil.com

ISO/OSI reference model → 了层

- ISO/OSI = ISO/Open System Interconnection
- 数据编码压缩
- ***presentation:*** **allow applications to interpret meaning of data, e.g., encryption, compression, machine-specific conventions**
- ***session:*** **synchronization, checkpointing, recovery of data exchange** 确保会话能维持
- **Internet stack "missing" these layers!**
  - these services, *if needed,* must be implemented in application

application
presentation
session
transport
network
link
physical

Encapsulation

We will learn each layer later!

Flexcil - The Smart Study Toolkit & PDF, Annotate, Note

This Document has been modified with Flexcil app (Android) https://www.fexcil.com

Why layering?

- Divide complex systems to simple components
- Easy for maintenance
- Flexible for updating

Flexcil - The Smart Study Toolkit & PDF, Annotate, Note

This Document has been modified with Flexcil app (Android) https://www.fexcil.com

Lecture 1 - Introduction

1. What is the network?
2. How does the network work?
3. **How to evaluate the performance?**

Flexcil - The Smart Study Toolkit & PDF, Annotate, Note

This Document has been modified with Flexcil app (Android) https://www.fexcil.com

Performance

Package Loss

丢包率

Delay

延迟

Bandwidth

带宽

Flexcil - The Smart Study Toolkit & PDF, Annotate, Note

This Document has been modified with Flexcil app (Android) https://www.fexcil.com

How do loss and delay occur?

- **Packages queue in router buffers**
  - packet arrival rate to link (temporarily) exceeds output link capacity
  - then, packets queue, wait for turn

Flexcil - The Smart Study Toolkit & PDF, Annotate, Note

This Document has been modified with Flexcil app (Android) https://www.fexcil.com

Four sources of packet delay

(把数据包从路由器推送到链路上)

节点总延迟

传播延迟(链路长度，介质传播速度)

$$d_{nodal} = d_{proc} + d_{queue} + d_{trans} + d_{prop}$$

节点处理延迟

d_{proc}: nodal processing

操作
- check bit errors
- determine output link
- typically < msec

d_{queue}: queueing delay 数据包在路由器的排队延迟
- time waiting at output link for transmission
- depends on congestion level of router

Flexcil - The Smart Study Toolkit & PDF, Annotate, Note

This Document has been modified with Flexcil app (Android) https://www.fexcil.com

Four sources of packet delay

带宽(网络传输数据能力)

低

高

类比高速公路

$$d_{nodal} = d_{proc} + d_{queue} + d_{trans} + d_{prop}$$

d_{trans}: transmission delay:

- L: packet length (bits)
- R: link *bandwidth (bps)*
- $d_{trans} = L/R$

d_{trans} and d_{prop} *very* different

d_{prop}: propagation delay:

- d: length of physical link
- s: propagation speed (~2.9×10^8 m/sec)
- $d_{prop} = d/s$

Flexcil - The Smart Study Toolkit & PDF, Annotate, Note

This Document has been modified with Flexcil app (Android) https://www.fexcil.com

Queueing delay

- *R:* link bandwidth (bps)
- *L:* packet length (bits)
- a: average packet arrival rate

- *La/R* ~ 0: avg. queueing delay small
- *La/R* -> 1: avg. queueing delay large
- *La/R* > 1: more "work" arriving than can be serviced, average delay infinite!

La/R ~ 0

La/R -> 1

Flexcil - The Smart Study Toolkit & PDF, Annotate, Note

This Document has been modified with Flexcil app (Android) https://www.fexcil.com

Packet loss

- Queue (aka buffer) preceding link in buffer has finite capacity
- Packet arriving to full queue dropped (aka lost)
- Lost packet may be retransmitted by previous node, by source end system, or not at all

丢包可能重传也可能无这个操作

缓冲区容量有限

(当缓冲区满时数据包到达就被丢弃)

Flexcil - The Smart Study Toolkit & PDF, Annotate, Note

This Document has been modified with Flexcil app (Android) https://www.fexcil.com

Throughput 吞吐量

- ***Throughput:*** **rate (bits/time unit) at which bits transferred between sender/receiver** 发送方和接收方传输比特的速率
  - *instantaneous:* rate at given point in time 瞬时
  - *average:* rate over longer period of time

两个速率不同管道（发送，接收的速率存在差异）

Flexcil - The Smart Study Toolkit & PDF, Annotate, Note

This Document has been modified with Flexcil app (Android) https://www.fexcil.com

Throughput

- $R_s < R_c$ What is average end-end throughput? Rs

- $R_s > R_c$ What is average end-end throughput? Rc

bottleneck link

link on end-end path that constrains end-end throughput

Flexcil - The Smart Study Toolkit & PDF, Annotate, Note

This Document has been modified with Flexcil app (Android) https://www.fexcil.com

Throughput: Internet scenario

- Per-connection end-end throughput: $min\{R_c, R_s, R/10\}$

- In practice: R_c or R_s is often bottleneck 瓶颈

10 connections (fairly) share backbone bottleneck link *R* bits/sec

Flexcil - The Smart Study Toolkit & PDF, Annotate, Note

This Document has been modified with Flexcil app (Android) https://www.fexcil.com

Summary

- What's the network
  - Examples 3
  - Network 6
- How does the network work?
